Prescription –

I. Case study

Many people including the Pope – are in elliptical senses – delirious and even desperately vague and finally following the weather in a crisis, but also following Christian ill health because of in fact the theological motif – Thucidydes which means a failing process of agrarianism, which is called, motifs, or theological motifs.

II. My own case

My own case, in elipses following perfect health and happiness, in a case elliptically of in fact ill health from the Pope and imbibition from women which is in analysis – a crisis of theirs being reflected in my life – which is just perfect health being ruined as a crisis.

It is not like the previous year which was a very complex set of cases and Prussian state violence.

This year is proposed as beautiful instead, just normal cases and normal issues – which makes me in fact elliptically – searching for the Talmudic life – which elliptically means only the crisis of evening and such waking up problems which is also not an issue – it is what happens to Italian women every day. I am trying to cure them as I cure myself which is what is called transference of how I tackle it – so far active senses is a cure. The future is about following the active lecture and that is called Spiritual synthesis and is always the case with a joke and fulfillment called utopianism, which means in fact a reduction and that alone, which should be fulfilling and as elliptical it is happiness which is currently an issue of worse kind because of issues of their insistence of the people .

III. Prescription for all

A prescription is just a elipses of in fact happiness as walking, in the evenings – which I shift to fresh water therapy, Buddhism in the night and in fact rhythmanalysis all the time – which becomes a complex thesis –

Rhythmanalysis is –

A. Room

B. Rhythms of walking

C. During the day – water therapy a lot.

An added point is to follow spiritual lectures or even Spirit as Hegelianism – it leads the Christian motif of in fact a leading Spirit which uplifts in all cases.

This means just add – axioms of walking in the evening – and the day is fresh water bath as well if need be.

Example –

I was delirious in Argentina. And then I started fresh water therapy and active senses of walking and even listening to the radio and listening to lectures which meant soothing me, and then I was just also going to swim as possible which I do as travelling to India, and others are possibly just busy doing fresh water therapy and rhythms of juice drinking and following radio – and it heals them.

My own case is just the process of Buddhism which they also follow.
